PWR designs, builds, delivers and maintains high performing hybrid power solutions

As the cost of renewables continues to fall, thermal energy at remote mines is increasingly being displaced by cheaper less volatile energy from hybrid power plants. These facilities incorporate varying combinations of thermal (gas/diesel), batteries and renewable energy depending on the location and geographic characteristics of a given site.

PWR is uniquely positioned to provide clients with competitively priced and technically sound Hybrid Power Solutions. PWR has proven credentials across all aspects of the hybrid power IPP model.

Summary

PWR is an independent power provider (IPP) that sells energy to the mining and high energy intensive industries from hybrid power plants.

Powerwest and Minegenco are joint shareholders in this venture and combine strong credentials in both thermal and renewable power.

Description

PWR is uniquely positioned to provide clients with competitively priced and technically sound Hybrid Power Solutions. PWR has proven credentials across all aspects of the hybrid power IPP model.

- 28 years and 80MW thermal power IPP experience in Australia
- 350MW of solar installations under IPP contracts since

2007 in eight countries and involving 30 projects

- Over 50 years of mining industry experience in Australia and globally
- Relationships with leading global equipment manufactures across thermal and renewable industries
- Innovative approach to project design and structuring off-take agreements with clients

Products & Services

- > Independent Power Provider - Hybrid Power Plants
- > Sells power to Clients under Build Own Operate Commercial Arrangements
- > Thermal - Diesel and/or Gas generators
- > Solar Power
- > Battery Energy Storage Systems
- > Wind Power

Major Clients

- > Northern Star
- > OZ Minerals
- > Mt Gibson Iron
- > Kingsgate Mining
- > ESKOM
- > Egan Street

Facilities and Equipment

- > Workshop - Perth Western Australia
